

# I Want More Eye Contact With My Patients.

**Your EHR Doesn't Have to Change Your Patient's Exam Room Experience. MDS of Kansas Can Help.**

A recent article in *AMA's American Medical News* cited physician concern that EHRs change the dynamics of the patient-doctor relationship. Why? Because many EHRs require physicians to type in patient data themselves instead of focusing their attention on the patient.

It doesn't have to be that way. With MDS of Kansas, LLC, physicians dictate notes instead of typing them, and our system automatically imports the transcribed notes into your EHR. We're experts at interfacing into EHRs like eClinicalWorks, Allscripts, Practice Partner, Cerner, and many others.

At MDS of Kansas, LLC, we believe highly trained medical specialists shouldn't be reduced to typists. **Visit us at [www.mdsokansas.com](http://www.mdsokansas.com), or call us today to find out more!**
