

There's More To My Patient's Story Than My EHR Template Lets Me Tell.

EHRs are important, but when it comes to clinical documentation they're often inadequate at capturing the context and nuances of a patient's story.

That's why many physicians prefer to dictate the qualitative information of their patient visits— like the History, Assessment and Plan. And with MDS of Kansas, LLC, those context-rich sections and transcribed patient notes can be seamlessly imported into your patients' record within your EHR.

Don't let your EHR prevent you from capturing your patient's full story. Visit us at www.mdsokansas.com, or call us today!
